

CARBON-AG

Activated Pelleted Carbon

- Designed for Use in Aquatic System
- High Adsorption Capacity
- Does not Leech Phosphates

Fritz ProAquatics Carbon-AG is a high quality 4x8 mesh granular activated carbon ideal for use in fresh or saltwater aquariums with all types of filters.

Dosage / Instructions:

Use 1/8 lb (approx. 1/2 cup) for every 20 gallons (78 liters) of aquarium water. The amount of carbon required may vary from system to system. Monitor the clarity of water and adjust the amount of carbon if necessary.

For best results, replace carbon every two weeks as part of regular tank maintenance. To keep the carbon "active" Carbon-AG has not been pre-washed, therefore it is necessary to thoroughly rinse with cold water. After rinsing, place carbon in a filter media bag. Place in high flow area of filter to maximize water flow through the carbon.
