

FritzZyme® 460

Biological Sludge Degradar for Saltwater

- Promotes a Clean, Clear & Healthy Aquarium
- Reduces & Simplifies Maintenance
- Bacteria Rapidly Digests Waste
- Eliminates Foul Odors
- Biologically Assists Nitrification
- Improves Water Clarity & Flow Through Filters

FritzZyme® 460 is a powerful probiotic blend of naturally occurring, environmentally friendly, live heterotrophic bacteria capable of digesting organic sludge common in aquariums. Sludge includes fish waste, leftover food and other decaying organic matter. Using FritzZyme 460 as part of a regular maintenance program will greatly reduce aquarium care including gravel vacuuming, water changes as well as prolonging filter media life. Rather than relying on freshwater bacteria to treat both fresh and saltwater, Fritz Industries has identified the species that naturally occur and perform best for each environment. FritzZyme 460 contains only species of bacteria native to saltwater. The bacteria in FritzZyme 460 is safe, non-toxic and non-pathogenic.

Dosage / Instructions:

If using as a initial dose, use 1 capful (5ml) per 5 US Gallons (19 L). For maintenance dosing, use 1 capful (5 ml) per 10 gallons (38 L). Shake well, add directly to aquarium in an area of high flow to allow product to circulate. Turn off UV sterilizers for 48 hours after application. NOTE: An earthy odor is normal — a natural result of biological activity. Odor will quickly dissipate when adding product to aquarium. Color variation is normal.

Available Sizes / Item # / Treats

Size /Treats	Item #
8 oz (473 gal)	83369
16 oz (946 gal)	83370
32 oz (1,892 gal)	83372
1 gal (7,570 gal)	83373
