Fritz COPPERSAFE

Disease Treatment

- Provides Relief from Parasites
- Stable, Non-Staining Formula
- Chelated Copper Formula
- Effective against Ick, Flukes, Anchorworms Velvet, and other external parasites

Fritz Coppersafe® solution remains active for over one month in the aquarium. It is a safe, stable, non-staining concentrate that does not color aquarium water.

The unique formulation of Fritz Coppersafe® solution maintains a total copper level of ~2.0ppm when used as directed. Copper test kits that measure chelated copper will help you to actively monitor copper levels when using Fritz Coppersafe® solution.

Dosage / Instructions:

Use 1 tsp/5 ml per 4 U.S. gallons (15 L), 1 cup (8oz) per 190 U.S. gallons (337.5 L). Treats water for one month. Treat replacement water.

Special notes on Coppersafe® solution: Copper levels are commonly measured as free or as total copper

Remove invertebrates from tank. Coppersafe® may be harmful to plants and snails. Do not use Coppersafe® solution with fish species that have a known sensitivity to copper.

Coppersafe® solution may cause an adverse reaction with some sensitive invertebrates. Invertebrates without an exoskeleton such as jellyfish, anemones, etc. should be removed before treatment. Coppersafe® solution may be harmful to plants, amphibians and snails.

Not recommended for use in reef aquariums.

Do not overdose.
