# Dark WATER

Almond Leaf Extract Water Conditioner

- Provides a natural source of tannins
- Extracted from dried Indian Almond Leaves
- Promotes Health & Colors
- Easy application

Fritz Dark Water Almond Leaf Extract is a natural water conditioner containing concentrated tannins from the leaves of the Terminalia catappa tree, also known as Indian Almond Leaves. These tannins will create a more natural environment for Bettas, shrimp and other fish. Almond leaves contain humic acids and tannins which are known to have antibacterial properties, naturally lower pH and create blackwater conditions in the aquarium.

Fritz Dark Water Almond Leaf Extract is suitable for all soft-water fish including betta, discus, tetras, angelfish, and killifish.

### Dosage / Instructions:

To deliver 1 ppm tannin, add 1 tsp (5ml) per one U.S. Gallon (3.8 L) or 6 drops per cup (236 mL).

To keep concentration consistent, add to new water during water changes. Avoid overdosing.
